

LIFTER

ABSTRACT OF THE DISCLOSURE

A lifter is constructed to include a hollow main upright,
5 a frame pivoted to the main upright to carry a hand winch, a link
coupled between the frame and the main upright, a hollow
auxiliary upright axially movably mounted in the hollow main
upright, a lifting upright axially movably mounted in the hollow
auxiliary upright, two first pulley blocks coupled between the
10 hand winch and the hollow auxiliary upright and adapted to lift
the hollow auxiliary upright upon operation of the hand winch,
and two second pulley blocks coupled between the hollow main
upright and the lifting upright and adapted to lift the lifting
upright upon operation of the hand winch after the hollow
15 auxiliary upright has been extended out of the hollow main
upright.
